FLOVEA is back in Las Vegas

FLOVEA, a French company specialized in the design and production of prefabricated plumbing solutions, was created on a will to provide innovations to the construction industry with all the benefits of scientific and technological advances. The company has invested a lot in fundamental research and applied engineering to design new efficient products and has also committed to add green technology to its portfolio in order to improve water consumption habits of household and businesses. FLOVEA's prefabricated plumbing solutions are designed for professionals concerned about the sustainability & uniformity of their work. The development of a range of plumbing automation products, already rewarded at the 2019 CES Innovation Awards, is also based on the company's desire to provide an effective solution to lower the waste of water and potential damage caused by leaks not detected on time. Leader on the French market, FLOVEA is now heading for the Middle East and the United States to introduce and implement our innovative solutions.

What are we exhibiting this year ?

A SMART PLUMBING SYSTEM FOR A SMARTER BUILDING MANAGEMENT

Last year we showcased FLOWBOX Interactive, a smart home device that brings connectivity to hydraulic networks for households. This year, we unveil its new version dedicated to buildings and offices. Our connected plumbing concept was honored with the CES Innovation Awards in the Smart Home category last year which reflects the product's outstanding design and engineering qualities. Our wish is to encourage companies into going green all while insuring a highly more effective management of their energy expenses. Our technology allows a powerful hydraulic network monitoring right from a dedicated mobile app'. It supports the user to keep an eye on the building's consumption and on the proper functioning of the hydraulic system. If anything suspicious is detected, FLOWBOX Interactive will allow the user to remotely make adjustments to avoid any damage. Through artificial intelligence and machine learning, leakage is automatically detected on the system and can be shut down in an instant without causing any disturbance in the use of water on other floors. Our mobile app' features all there is to be needed in one place with a unique key user experience. This eco-friendly device will become one's very own property management assistant regarding water usage to prevent important material & financial damages but also to insure an optimal use of the hydraulic system.

Our product is aimed for developers, main contractors, architects, engineering or property management companies that wish to use new innovative & eco-friendly technologies in their business.

Our device will be available for a live demo on our booth #50241 at Eureka Park.
